

Recombinant Human pro IGF-II

Product Description

- Endotoxin-free*
- Animal-derived product free
- Available in Bulk
- High Stability

Xeno-free pro-IGF-II^{HuXp} is expressed in human 293 cells as a monomeric glycoprotein with an apparent molecular mass of 25 kDa. Glycosylation contributes to stability in cell growth media and other applications. IGF-II expressed in *E. coli* is typically 7.5 kDa and nonglycosylated. This cytokine is produced in a human cell expression system with serum-free, chemically defined media.

All HumaXpress[®] HumanKine[™] cytokines are animal-component-free and Xeno-free[™]

Typical Specifications

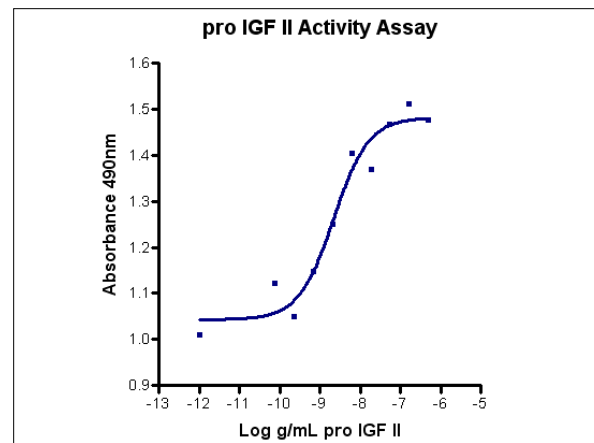

Species	Human
Expression	HEK293 Cell Expressed
Activity	Typically ≤ 50 ng/mL EC ₅₀
Purity	>95%
Endotoxin	<1 EU/ μ g
Molecular Mass	25 kDa, monomer, glycosylated
Formulation	10 mM Tris-HCl pH 7.4 + 350 mM NaCl

Purity Confirmation

The protein was resolved by SDS-polyacrylamide gel electrophoresis and the gel was stained with Coomassie blue.

Activity Assay

The activity was determined by the dose-dependent stimulation of the proliferation of MCF-7 cells (human breast cancer cell line).

Reconstitution Buffer

Briefly centrifuge the vial before opening. It is recommended to reconstitute the protein in sterile 1xPBS containing 0.1% endotoxin-free recombinant human serum albumin (HSA).

Limited Use and Restrictions Unless otherwise stated in our catalog or other company documentation accompanying the products sold by HumanZyme Inc. are intended for research use only and are not to be used for any other purpose, which includes but is not limited to, unauthorized commercial uses, including resale or use in manufacture, in vitro diagnostic uses, ex vivo or in vivo therapeutic uses or any type of consumption or application to humans or animals.
