## Product Description

Animal-free Recombinant Human Human Growth Hormone (HGH) is expressed in human 293 cells with an apparent molecular mass of 22 kDa. It is also known as somatotropin and is a pleiotropic cytokine of the hematopoietic growth factor superfamily. The purity is greater than 95%. It is known primarily for its role in stimulating the development and differentiation of muscle, bone, and cartilage. This cytokine is produced in a serum-free, chemically defined media.

## Activity Data

Recombinant human HGH (HZ-1007) stimulates dose-dependent proliferation of the NB211 rat lymphoma cell line. Cell number was quantitatively assessed by PrestoBlue<sup>®</sup> Cell Viability Reagent. NB211 cells were treated with increasing concentrations of recombinant HGH for 96 hours. The EC50 was determined using a 4-parameter non-linear regression model. The EC50
